THE STORY OF BODGER'S WILT-RESISTANT ASTERS

For hundreds of years horticulturists have developed the China Aster until it is one of the most colorful of the late summer annuals. About twenty years ago, however, the disease Aster Wilt became so widespread that it threatened the very existence of the Aster family. The problem was this: Wilt is caused by the fungus Fusarium conglutinans var. Callistephi, which lives in the soil. It may be spread by tools, water, seed—and it persists almost indefinitely. It may be avoided by using soil that has never grown Asters before, but this course is usually impractical. There is at present no drug or chemical which will destroy it. How, then, is Aster Wilt conquered?

The process developed by Bodger Seeds Ltd. in its pioneer work is much like vaccination in human beings: Plants are exposed to the Wilt and those which survive supply seed for the next generation of test plants. This work is carried on in the Wilt Workshop, a twenty-acre farm staffed by Bodger experts which is devoted solely to wilt work and is purposely infected with as much wilt as possible.

The tendency to wilt-resistance can be inherited, so the plants grown from the seed produced the previous year are quite resistant—but the process does not stop there. Many successive generations are grown in the Workshop until the best lines have great resistance. By means of this technique—survival of the fittest—Bodger's original strains of wilt-resistant Asters were developed.

In all cases it is resistance, not immunity, which is developed. The tendency toward resistance is inherited, and will "breed out" if the strain is not put through the Workshop cycle periodically. All Bodger Aster introductions are developed in the Workshop, and each year's stock seed comes directly from a two-generation exposure to wilt of a virulence not found in ordinary soil. Your Bodger Aster seed is highly resistant. Even a few generations of increase in non- or lightly-infected soil will produce seed of decidedly less resistance.

Resistance is hereditary, and so are plant and flower types. Bodger wilt-resistant strains are developed from non-resistant, Commercial varieties, quite true to type—not from crosses between commercial and inferior, though resistant, types. Because we take pride in maintaining this accuracy of type, some varieties are not offered as wilt-resistant. At present we cannot make these resistant without sacrificing essential qualities of type, and we do not recommend their use where wilt has been observed. Combining wilt-resistance with good commercial types is not easy; since there will always be some variation. Resistance is expressed as a percentage, a high value of which is required to qualify as "wilt-resistant."

The war against wilt is a continual one, complicated by bad weather breaks which sometimes wipe out a long chain of selection work. Among commercial growers, Bodger Seeds Ltd. is the pioneer in wilt work, and the only firm actively engaged in continual research. Your Bodger wilt-resistant Aster seed is of high quality, true to type, and as wilt-resistant as we can make it. Because of this research work, wilt is no longer a problem to the careful grower who makes sure he has resistant stock.

Asters

All Asters listed here can be grown by the home gardener wherever Asters are popular. The non-resistant Giants require care to avoid wilt infested ground, but yield tremendous "show" blooms for the careful gardener. Most of these Asters are also in great demand as florist's commercial varieties, especially those marked "f". In any case, seed we offer is of highest florist quality.

ASTER PRINCESS WILT RESISTANT (f) (Bodger)

An ideal type for florists. 3"-3½" flowers on long stems, have crested center that remains full when flower is completely open, surrounded by multiple rows of guard petals. An exceedingly good shipper. Fine for home gardeners because of high wilt resistance. Plants 2'-2½' tall, branching habit, blooms in late August.

R. H. S. HORTICULTURAL COLOR CHART: In various sections of this list we have added to the regular descriptions of a variety some numbers in italics. These refer to color blocks in the Color Chart which many of our customers have secured either from us (as U. S. distributors) or the Royal Horticultural Society direct. To see the precise color of a flower so described, turn to the page indicated and mask the proper block with the black mat provided. For example, Larkspur Gt. Imp. Los Angeles Improved is described as (623/1). Turn to page 623 and mask the block (623/1), which is the first tint of the full hue 623. We are gradually completing color registrations of all listed varieties in which exact color descriptions are vital. By means of this Chart, the most complete ever compiled, exact color descriptions may be sent by letter or wire, without recourse to paints, ambiguous names or other makeshifts. Applicable to other trades and uses, also, in which color standardization is desirable. Obtainable from us, in full sets (2 volumes) only—\$12.00/set.
